HEMP FOR YOUR SKIN

ESSENTIAL FATTY ACIDS

Hempseeds are incredibly rich in healthy fats. They are composed of over 80% polyunsaturated fatty acids (PUFAs), including essential fatty acids omega 3 and 6 and 9 in a favorable 3:1 ratio. These particular fatty acids play a vital role in normal skin function and appearance.

B VITAMINS

Hemp seed oil packed with Vitamin B, which may help to improve the appearance of aging skin.

ANTIOXIDANTS

Hempseed oil also contains powerful antioxidants in the form of vitamin C and E. Unstable molecules called free radicals can accumulate in our bodies as byproducts of natural processes, and from external factors such as air pollution, industrial chemicals, and other environmental aggressors.

These molecules are linked to skin damage and premature aging. Antioxidants have been shown to combat the formation of free radicals, and may protect skin from such changes.

AMINO ACIDS

Key amino acids in hempseed oil may assist in supporting skin's optimal moisture levels to support natural radiance.
